

Ares QR Guard Tour Verification

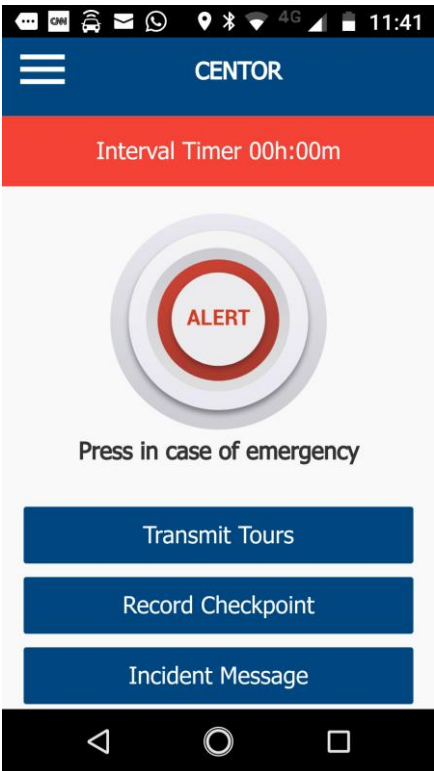

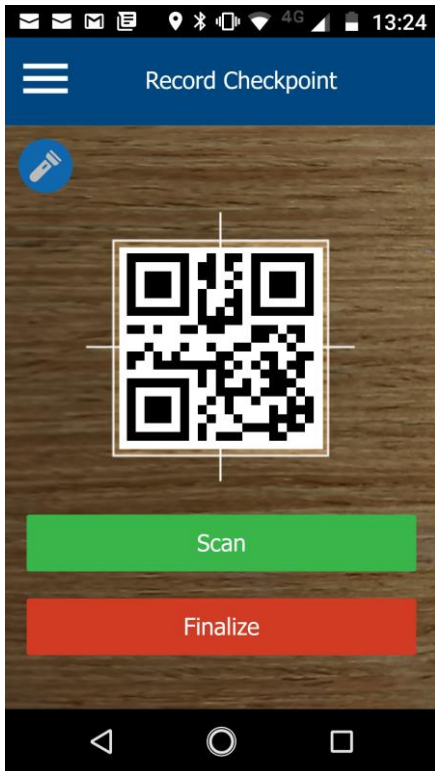

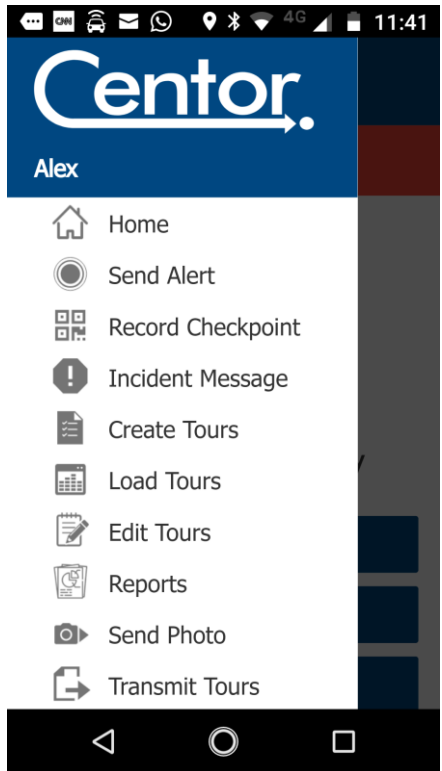

Runs on Android Smartphones. Allows reading and recording of strategically positioned QR Checkpoints, to verify security tour compliance.

Employs a "Start Tour" time counter which regulates the time taken for each tour or an array of multiple tours, and allows precise reporting of duration and omissions.

If during the tours abnormal situations are encountered, e.g. broken door, broken window, fire hazard, intruder, etc. etc., these can be reported through Ares QR. Also photos of those abnormal occurrences can be taken and transmitted.

In case of emergency Ares QR App features a configurable panic button, which when pressed, will transmit an Alert SMS message and will initiate an emergency phone call.

On the tour reports, GPS coordinates of each recorded checkpoint, are chained to the name of the officer in charge, site name, tour name, plus date & time. Synchronization by the Start Tour time counter, will allow timely reporting via automatic emails to the owner/manager of the site and to the security supervisor. Ares QR is "Stand Alone" and does not require cloud database services, it employs professional mail delivery services. The reports can be run on any state of the art device via Google Sheets®, Microsoft Excel®, CSV or Open Office Tools.
